

## STATEMENT OF PURPOSE

I was too young, when I first laid my hands on the computer. It was a fascinating experience, ever since, I encountered it. Computer is changing the way we think, work and live. It is surprising to see how this man-made object has the power to outwit man himself. The ease with which a computer performs complex tasks which otherwise would take a lot of manpower is fascinating. This is going to become the most influential tool of forthcoming centuries. It was this particular fact that motivated me to take up Computer studies for my higher qualification. I chose Informatics practice as one of the subject along with other science subjects in my 12<sup>th</sup>. This subject offered me basic knowledge in programming, networking, designs and technical concepts of computer system.

Due to my keen interest and dedication in the field of computer, I decided to pursue my higher studies in the same domain. I did a thorough research and found more practical oriented subjects being offered by Canada. Among the colleges in Canada, I found an apt course, called Computer System Technology, offered at Seneca College. It's an advanced diploma program. I am totally impressed with the modules. There are three primary branches of Information and Communications Technology, where I will get strong foundation on electronics, software development and IT infrastructure. In addition, option subjects in upper semesters will allow me to specialize in my career field of interest. I found that it's a very reputed and ranked college in Canada. There mode of teaching is also best among all the other colleges. I was also given great insights into the course by one of the representatives of Seneca College, who answered all my queries and explained the kind of international exposure I will be receiving that will broaden my interpersonal skills.

I also found that Canada is safe and secure place for international students. The parameters like high quality education system and research oriented programs are the positive highlights of Canada. Also, the education is feasible to study initially.

After completion of my diploma course, I have two options, either join a Bachelor's degree level, or else I will utilize my stay back option to gain an international experience, given by the Canadian government, before I come back to India. I am saying this because after completion of my course, as a graduate with relevant equipment of knowledge, will enhance my career opportunities in Computer and Information Technology fields. I can serve in organizations of both small and large sectors as programmer, network designer/analyst, software specialist, product development specialist or technology support etc. Above all, I shall take a suggestion from my parents at the time of completion of my course and abide accordingly. I firmly believe that Seneca College is a stepping stone for me to lead a fruitful life.

As a part of my studies I have already paid CAD 7258\$ towards my first semester of my course. I have taken GIC from ICICI of CAD 10,200\$ to cover my living expense in

Canada. My parents are the pillar of our family. They motivate and encourage me, my brother and my sister in all our new attempts and ventures. My father is working in Italy and has sufficient earnings and savings to support me for my studies in Canada.

I will be fortunate enough, if I have an opportunity to study advanced diploma at Seneca College, Canada. I hereby request you to kindly grant me the necessary Student Visa and oblige
